# Intelight MaxView®

Traffic Management Software

MaxView's Thin Client Architecture means :

Quicker installs with less configuration

- Users Simply connect to the network and direct their browsers to the System server. No Software to Install on Client User PCS

Lower cost & More Scalable

- Thin Client PC's are generally less expensive. MaxView's flexible server configuration allow greater scalability.

Less maintenance

- The constant maintenance of distributed PC operating systems is eliminated with Thin Clients.

Improved At-A-Glance Management

- Manage your entire Traffic network from MapView viewing all MaxView Servers and all Communications Servers and Controllers in one tree.
- See which devices are online and follow graphically the network path from the devices back to all the servers.
- Configure and maintain each User Client individually, or put the clients into groups, and grant individual access rights.

Remote Administration

- View multiple servers, devices, and users from a Map single screen. This allows management of the System from a single machine regardless of how many clients or servers make up the system.

MultiSession

- Simultaneously connect two or more system servers and run the applications you need. Switch between your sessions using a mouse click or keystroke.

Automatic Failover

- In the event of a Terminal failure, the client will fail over to a backup server and continue working.

Instant Graphs & Reports

- Maxview now includes online real-time data graphs and usage charts, and has the ability to do trend analysis.

Event Logging

- MaxView retains and displays a history of system events that can be used to monitor operations and/or troubleshoot.
